Slide 1 — Activity 1.1

Research and Select the Appropriate Generative AI Model

- **Generative AI** is a type of artificial intelligence that can create new content.
- It can generate **text, images, audio, video, and code**.
- Different AI models are designed for different tasks.
- Selecting the right model depends on:
 - Type of task
 - Accuracy required
 - Cost
 - Speed
 - Ease of use

Objective:

To research available generative AI models and select a suitable model for a specific task.

Slide 2 — Popular Generative AI Models

AI Model Organization		Main Use
GPT	OpenAI	Text, coding, reasoning
Gemini	Google	Text, images, multimodal tasks
Claude	Anthropic	Writing, analysis, coding
Llama	Meta	Open and customizable AI
DALL·E	OpenAI	Image generation

Key Point:

No single model is ideal for every task. The choice should match the project's requirements.

Slide 3 — Model Selection Criteria

Before selecting a model, consider:

1. Task Requirements

What needs to be generated—text, image, code, audio, or video?

2. Quality & Accuracy

The model should produce reliable and useful results.

3. Cost

Consider whether the model is free, subscription-based, or API-based.

4. Speed

Choose a model that provides results within the required time.

5. Privacy & Security

Sensitive information should be handled using an appropriate and secure service.

6. Integration

Check whether the model can work with the required applications or APIs.

Slide 4 — Selected Model & Conclusion**Selected Model: GPT****Reason for Selection:**

- Strong capability for **text generation and understanding**
- Useful for **research, summarization, brainstorming, and coding**
- Can follow detailed instructions
- Suitable for educational and professional tasks
- Supports a wide range of applications

Conclusion

The appropriate generative AI model should be selected based on the **task, quality, cost, speed, security, and integration requirements**. For tasks primarily involving text and reasoning, **GPT is a suitable choice**.

Thank You
